Tulip Time at Hart & Vick's Trial and Display Grounds at Fairport, N. Y.

One Sunday last spring nearly four thousand people visited our Display Grounds. It is only a short distance east of Rochester, and very easy to find. From early in April until November it is a most interesting place to visit.

Hart & Vick's Fairport Display Gardens

at Fairport are far more than a "place for show." They were definitely planned to acquaint visitors and customers with new flowers and plants, to bring out the good points of the more familiar varieties, and to show how plants and flowers may be used to the best advantage.

In spring, the grounds are gay with the glories of more than five hundred varieties of tulips and narcissus, scores of crocuses, snowdrops, hyacinths, and other plants that bloom at the beginning of the year.

As the season advances you will find in these extensive grounds nearly a thousand different kinds

of annuals and perennials, giving a glorious display of color until late autumn. In fact, it might not be impossible to find a few scattered flowers when the fields are under a mantle of snow. The beds are conveniently arranged, varieties are labeled, and every care taken to make the Trial Grounds useful to all visitors.

Believing that it will be helpful to you, we here give a list of annuals and perennials that give color and fragrance in your garden. To assist still further, the plants are grouped into "use classes" so that you may select just what is needed for each purpose or location.

Highland Park Grass Seed makes the finest lawns and provides the proper setting for the home.

HIGHLAND PARK LAWN GRASS SEED MAKES THE FINEST LAWNS

Highland Park Grass Seed

A mixture of the best quality Kentucky Blue Grass, Fancy Red Top, Colonial Bent and White Dutch Clover. We omit the clover for those who wish a lawn without it.

This mixture has proved its worth by producing beautiful and permanent lawns for the city home, country estate, and public park. It is a careful blending of varieties of short, fine-leaved grasses and a correct percentage of pure white clover, and will make a thick, deep-rooted, velvety evergreen sod that will hold the moisture and remain fresh and green during the dry season in summer. This is our most popular Grass Seed Mixture. It has proved its quality not only on the smaller lawn of the city and suburban home, but has been and is being used with splendid results in many of the city parks, cemeteries, and large estates. Professional landscape gardeners specify that they will use Highland Park Grass Seed when submitting plans to particular patrons. The name "Highland Park" is a symbol of quality. Sow at rate of 1 pound to each 300 square feet of new lawn, reseeding 500 square feet of old lawn. ½ lb. 30c; lb. 55c; 2 lbs. \$1.00; 3 lbs. \$1.45; 5 lbs. \$2.35; 10 lbs. \$4.50; 25 lbs. \$10.75; 50 lbs. \$20.75; 100 lbs. \$40.00. Delivered, transportation paid.

Shady Nook Mixture

On many lawns there are unsightly bare spots under trees and between adjoining houses where it is impossible to get the ordinary lawn grass to grow. This mixture is made up of short-growing, fine-leaved grasses that will give you an evergreen sod in the most densely shaded spots. Often the soil is sour and moss grows in such places, which should be treated with lime. Sow at rate of one pound to each 200 square feet of new lawn; reseeding 350 square feet of old lawn. ½ lb. 35c; lb. 60c; 3 lbs. \$1.65; 5 lbs. \$2.65; 10 lbs. \$5.00; 25 lbs. \$11.85; 50 lbs. \$23.00; 100 lbs. \$45.00. Delivered, transportation paid.

ROOTONE TREATED HIGHLAND PARK GRASS SEED

After a series of scientifically conducted trials we are offering to you our regular Highland Park Lawn Grass Seed mixed or treated with a hormone powder. These trials proved several things to us. First, the hormone-treated seed germinated or started growing more quickly than the untreated seed. The plants were more robust in growth, the color a little deeper green. The roots were larger and longer. Please remember, however, that these trials were made in flats or boxes, in the winter, and in our greenhouses. This spring and summer we will have plots sown with hormone-treated seed at our Fairport Trial Grounds, where you can see just how much difference this treatment makes in growing good lawn grass. Highland Park Grass Seed treated with hormones: ½ lb. 35c; lb. 60c; 2 lbs. \$1.15; 3 lbs. \$1.65; 5 lbs. \$2.65; 10 lbs. \$5.00; 25 lbs. \$11.85; 50 lbs. \$23.00; 100 lbs. \$45.00. Delivered, transportation paid.

Terrace Grass Mixture

Banks and terraces need deep-rooting, very hardy grasses to hold them in place. In this special mixture we have combined varieties that will quickly form a thick, matted sod that will keep the bank from washing in heavy rains, and remain fresh and green all season. We recommend sowing grass seed for terraces at the rate of 1 pound to each 200 square feet. If the slope is very steep, mix one quart of oats with one pound of seed and sow on each 100 square feet. ½ lb. 30c; lb. 55c; 3 lbs. \$1.45; 5 lbs. \$2.35; 10 lbs. \$4.50; 25 lbs. \$10.75. Delivered, transportation paid.

Sod-Lot Mixture

A mixture of low-growing grasses which forms a mat of roots quickly. This mixture is being used most successfully by parks, cemeteries, and landscape contractors requiring sod for transplanting. Not prepaid, 25 lbs. \$11.25; 100 lbs. \$40.00; 1000 lbs. \$350.00.

Lawn Grass Seed of Inferior Quality is Always an Expensive, Unsatisfactory Purchase

Bent Grass Mixture

To meet the demand for a superior grass seed mixture, we have combined in this formula the seeds of grasses that not only produce the finest leaf-blades, but varieties that creep, mat together and make a soft, luxuriant, evergreen turf the entire season. When preparing the soil for this Grass Seed Mixture, we recommend the use of bone meal (100 pounds to every 500 square feet) well worked into the soil before the seed is sown. After the grass is up apply sulphate of ammonia (1 pound dissolved in 10 gallons of water to every 100 square feet). Sow seed at the rate of 1 pound to every 250 square feet. 1/2 lb. 55c; 1 lb. \$1.00; 3 lbs. \$3.75; 5 lbs. \$4.60; 10 lbs. \$9.10; 25 lbs. \$22.00; 50 lbs. \$43.25; 100 lbs. \$85.00. Delivered, transportation paid.

Kent Wild White Clover

Small leaves, few blossoms, low creeping plant. Splendid for lawns on rich soil. Sow in spring, 1 lb. to 7500 square feet. 1/4 lb. 75c; 1 lb. \$2.50; 5 lbs. or more at \$2.25 per lb.

This is the Clover to sow on lawns. It is low-growing, forms a mat-like sod, and remains green all season. Particularly useful on sandy soils, especially where lawns are to be built at the lake or seashore. Mix 1 pound of seed with 2 quarts of sand or fine soil to insure an even distribution; will sow 100 square feet. Postpaid, 1/4 lb. 40c; 1/2 lb. 70c; 1 lb. \$1.25; 5 lbs. \$5.75; 10 lbs. \$11.00.

Hart & Vick's Delphiniums

THESE are the most popular of all the hardy plants for the garden. The tall spikes of lovely blue flowers, standing erect above the dark green foliage, make a wonderful display. They begin to bloom in June and by cutting the plants to the ground, as the crops of flowers fade, a second and third lot of bloom may be had. Seed sown in boxes in the house early in the spring, and plants set outside in the garden 8 inches apart, will bloom the first year. Seed may be sown in the open ground from April until August, but is not likely to flower until the next year.

Hart & Vick Exhibition Hybrid Delphiniums

BUTTERFLY DELPHINIUMS

Chinese or Butterfly. A distinct variety growing 2½ feet high and covered with graceful sprays of butterfly-like flowers the first year. The plant is absolutely hardy and will come up larger and stronger each year.

Oxford Blue. Dark blue. Pkg. 15c; special pkg. 40c.

Cambridge Blue. Light blue. Pkg. 25c; special pkg. 75c.

Snowflake. Pure white. Pkg. 15c; special pkg. 40c.

How to Grow Delphinium. Always insist on fresh seed. Some of the most expert professional private gardeners chill or freeze their Delphinium seed in the refrigerator or ice-chest for 24 hours and sow it while it is still cold. Sow from early spring until August in a well-prepared seed-bed, covering with ½ inch of fine soil, firmed down. After sowing, cover the seed-bed with mulch, new lawn-clippings, peat moss, or even newspapers if kept wet. In 12 days remove mulch gradually. When plants have three leaves, move and space 6 inches apart. The following spring transplant in groups into your garden, allowing 1 foot between the plants. Mulch, after the ground is frozen, for protection. Delphinium require an alkali or sweet soil. In the early spring throw a handful of lime on the plant. Feed liberally with pulverized sheep or cow manure (Bovung) and water thoroughly. When the first crop of bloom has faded, cut the flower spikes off just above the foliage and keep slightly dry for two or three weeks to give the plants time to rest before the new shoots appear above the ground. When this takes place, cut the rest of the old stock off, sprinkle a teaspoonful of ammonium phosphate around each plant, rake it into the soil slightly and water thoroughly. From the new shoots appearing from the ground select two or three of the strongest and break the rest out. The remaining ones will develop into fine spikes again. Do not force a new growth late in autumn, rather keep the plants on the dry side because if forced late in the season the plants will soon exhaust themselves and gradually die out. Mildew will attack plants grown close to a wall, or planted thickly together, especially later in the fall. The new "Ortho Mildew Spray" (See Page 62) diluted to a four per cent strength, will control it perfectly. This spray not only acts as a preventative but will cure heavily affected plants, as it kills mildew instantly. It is a light oil and can be applied at any time without burning.

Belladonna Improved. We offer a greatly improved strain of this popular variety of Hardy Larkspur, a strain that has a brighter and larger turquoise-blue flower, a longer and better-filled flower-spike that is carried on a stronger and longer stem, and greatly excels the old Belladonna for continuous blooming. How to Grow Sweet Peas Successfully

Dust your sweet pea seed with Nitragin and sow as soon as the ground can be worked in the spring. Dig a trench about a foot wide and deep, fill in with 6 inches of well-rotted stable manure; tread down firmly and replace the good garden soil. Draw a single straight line in the middle of the prepared surface, about three-fourths inch deep; sow seed at even distances of about 3 inches, and cover. When the plants grow about 3 or 4 inches high, thin out to 6 inches from each other. As soon as the vines reach a height of about 8 inches, proper supports should be provided.

The Sweet Pea is a moisture-loving plant, and by the month of May the plants will require water. Use a mulch of old stable manure or peat moss and soak well with the hose as needed.

Hart & Vick's Vegetable Seeds

Are Tested by a Famous Agricultural Experiment Station and the Results of This Test Appear on Every Package of Vegetable Seeds We Send Out

The varieties of vegetables listed in this Catalog are those which have proved to be the best for use in the gardens of our customers and in our trial grounds. We show in CAPITAL letters those kinds that we especially recommend to you.

You get the same high quality seed in these garden-size packages as we furnish to the market gardener and florist, whose living depends on the quality of seed he sows.

ASPARAGUS

A leaflet on "The Planting and Care of Asparagus" sent with every order.

One ounce of seed will produce 200 plants; 5 lbs. will sow an acre.

The popularity of Asparagus in the home garden is growing rapidly, as people learn how easily it may be raised, and how much better the flavor is when cooked immediately after cutting. Asparagus begins to lose flavor 20 minutes after being taken from the ground. A small bed 12 feet wide and 25 feet long will hold 100 plants and yield sufficient Asparagus for the family of ordinary size. Soak the seed in warm water for 24 hours, then sow an inch deep in rows a foot apart. The following spring set the best of the plants in the permanent bed.

MARY WASHINGTON. This new variety is the very finest for the home garden or to grow for market. At last we have not only a rust-proof variety but an Asparagus that is very fast growing, exceedingly tender, of excellent flavor, and that produces heavy stalks 1 to 2 inches in diameter. It is larger and earlier than Pedigree Washington, and the stalks are slightly oval in form.

Roots. 25 for 75c; 100 for \$2.00, postpaid. Not postpaid, 1000 for \$10.00.

Seed. Pkt. 10c; oz. 20c; ¼ lb. 50c.

PARADISE ASPARAGUS

Sensational new, early maturing variety. Produces normal crop **one year earlier** than other varieties and produces heavier throughout its life. Large, crisp, tender stalks with exceptionally fine, mild flavor. Only six or eight stalks required to the pound. Ideally suited for freezing, the superior taste being retained after freezing for the market. Is as strongly rust-resistant as the Martha Washington variety. A new, better variety that will take the country by storm. An excellent variety for home gardens, commercial growers and shippers.

Roots. 12 for 85c; 25 for \$1.50; 100 for \$5.00.

Seed. Pkg. 20c; oz. 45c; ¼ lb. \$1.50.

New Paradise Asparagus

ARTICHOKE

One package of seed will produce 100 plants; 1 ounce will sow 100 feet; 5 pounds an acre.

A perennial producing flower-buds, used for food, the second year after sowing. Protect in winter in the North. Sow seeds early in spring. If sown in hotbeds in February can be grown to bud the first year.

LARGE GREEN GLOBE. Standard sort. Large pkg. 10c; oz. 60c; ¼ lb. \$1.75.

All gardeners are invited to visit our display grounds at Fairport. Hundreds of Tulips, Narcissus, Iris, Phlox, and a great collection of annuals make the gardens glow with color. From the days when Snowdrops push through the thawing soil the gardens are full of interest to expert and amateur alike.

Large Green Globe Artichoke

BRUSSELS SPROUTS

One package of seed will produce 200 plants; 1 ounce will sow 200 feet and produce 3000 plants.

The small heads, resembling cabbage, are formed along the stalk. Prepare like cabbage or in cream, like cauliflower. Sow seed in spring; transplant and cultivate same as cabbage, except leaves should be broken down in fall, giving heads more room to grow. Freezing improves the quality of the sprouts. They may be left in the ground, here in the North, until December.

Long Island Improved. (Special Strain). A very fine strain grown extensively for the New York market. The plants produce a large crop of very solid heads of sweet and delicious flavor. Pkg. 10c; oz. 50c; ¼ lb. \$1.50; lb. \$5.00.

BROCCOLI

One ounce seed will produce about 1500 plants

A vegetable very similar to cauliflower but less delicate in flavor. Hardy, thrives best in cool weather and should be hoed and watered frequently. Sow the seed inside or in cold frames in January or February and set out plants when ground is warm. Cultivate the same as cauliflower.

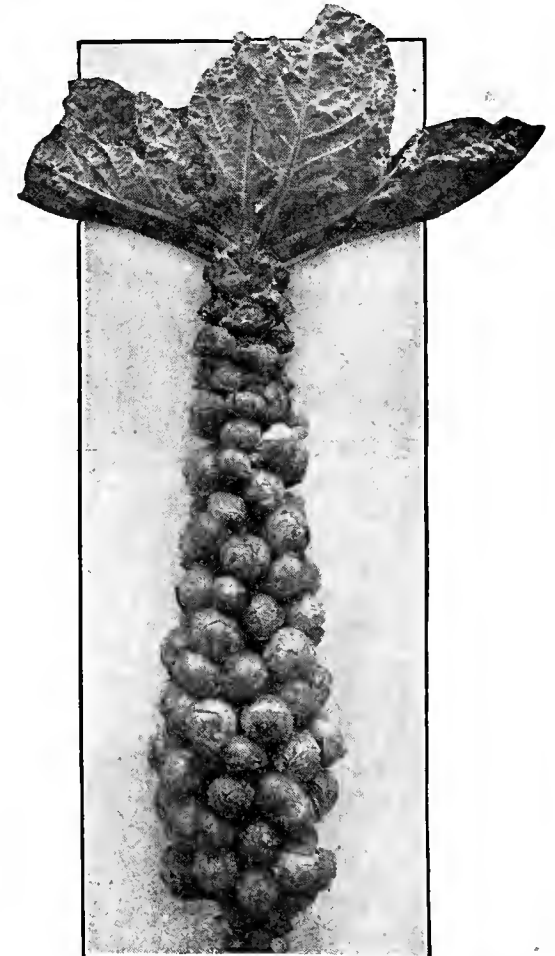

Italian Green Sprouting Calabrese. A favorite vegetable with the Italians and now becoming very popular in our American gardens. The plant forms good-sized heads, and after these are cut, other heads form, providing fresh vegetables for a long season. Sow early in cold frames for spring; outdoors in June and July for a fall crop. Pkg. 10c; ½ oz., 35c; oz. 50c; ¼ lb. \$1.75.

Italian Green Sprouting Calabrese Broccoli

Dust Your Seed with ROOTONE

It does two things. The Rootone remains on the seed until the seed sprouts and then it acts to kill the fungi, and at the same time slowly penetrates the seed hull and helps the natural hormones start root formation and upward growth. Rootone makes larger and more abundant roots that make larger and better plants. A 10-cent package of Rootone will treat 2½ lbs. of seed.

Brussels Sprouts

PENN STATE BALLHEAD

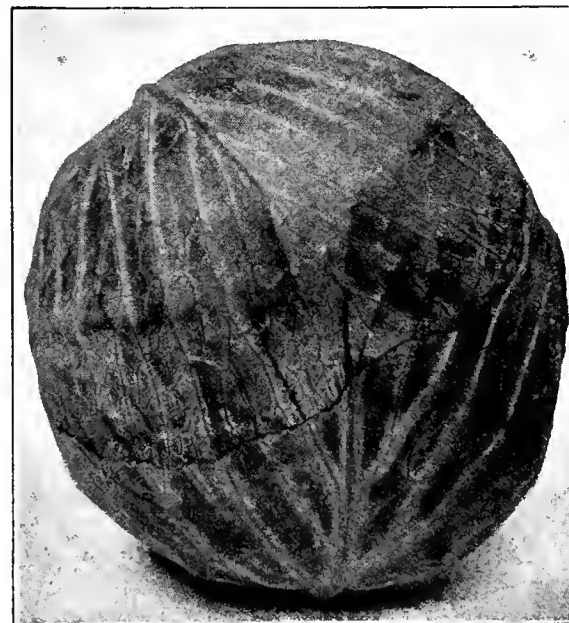

One of the newer varieties which we think is bound to become a leader among the main-crop or late varieties. It was originated by Penn State College and is the heaviest-yielding sort we have ever seen. The head is broader and wider at the base than Donish Ballhead, and is especially pleasing to those who prefer the flat type. Crops of more than 30 tons have been taken from one acre. The heads are solid and are exceptionally good keepers. Pkg. 10c; oz. 35c; 1/4 lb. \$1.25.

CHINESE OR CELERY CABBAGE

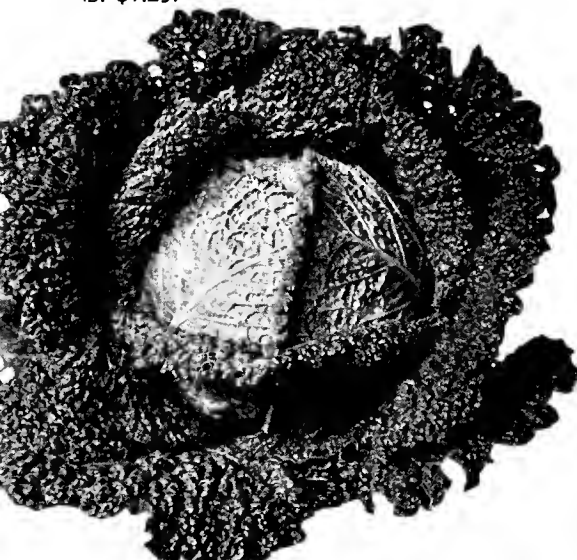

Cut into quarters and boiled with meat, or alone, its mild, rich flavor and tenderness put it far ahead of Cabbage. Sliced thin and served cold with a cream dressing, it makes a most appetizing cole-slaw. Served with broiled sliced bacon and a hot meat gravy poured over it, it is very good. Boiled, fried, baked with cheese—any way you have a mind to cook or serve Chinese Cabbage you will find it delicious. There won't be any tough outside leaves to it, for it's practically all heart, tender, crisp, and juicy. It's very easily grown. Sow the seed in July, in rows 15 inches apart, and thin the same as lettuce.

CARROTS

For Garden and Farm

One package of seed will sow 50 to 60 feet of row; 1 ounce, 100 feet; about 3 pounds, an acre

Any good land, thoroughly worked, will produce a satisfactory crop of Carrots. Sow as early in spring as possible, though good crops may be grown from seed sown as late as the middle of June. For table use, sow smaller kinds early, in rows 16 inches apart; for field-growing, in drills, 18 to 24 inches apart. Cover $\frac{1}{2}$ to 1 inch deep and press soil down firmly above the seed. Thin 2 to 6 inches apart, according to size of variety. When preparing Carrots for the table, wash and scrape them, never peel; the best flavor and color are near the skin.

CAULIFLOWER

One package of seed will produce 200 plants; 1 ounce, about 3000 plants

For early Cauliflower, sow seed under glass in January or February and transplant to cold frames, 2 to 3 inches apart each way. Set in open ground early in the spring in rich, warm, moist soil. Water freely in dry weather, especially when plants are heading. For main crop, sow seed in June; set out your plants the latter part of July. After heads have begun to form, draw leaves over and tie to protect from the sun and keep them white. Cut while heads are compact and firm. Protect from insects by dusting or spraying with tobacco dust or kerosene emulsion.

DANAMERICA SUPER-SNOWBALL. Large, deep, solid, snow-white heads. Foliage heavy and upright, protecting the heads. Pkg. 15c; $\frac{1}{4}$ oz. \$1.00.

Dry Weather or Danish Giant. This fine variety is specially adapted for growing in sections subjected to long, dry seasons and will produce long, solid, pure white heads of delicious flavor in spite of lack of moisture. Pkg. 15c; $\frac{1}{4}$ oz. 75c; $\frac{1}{2}$ oz. \$1.25.

EARLY SNOWBALL. An extremely early, dwarf variety, most desirable for the home-garden. Admirably adapted for forcing or wintering over for early crop; also one of the best for late summer or fall crop. Pkg. 15c; $\frac{1}{4}$ oz. 60c; oz. \$1.85.

Danamerica Snowball Cauliflower

CELERY

Hart & Vick's Finest Strains

1 pkt. of seed will produce about 600 plants;
1 oz., about 9000 plants

Celery seed is very slow in germinating and should be sown in March in flats under glass and kept moist. When plants are 2 inches high, thin out and transplant to stand 3 inches apart each way. When 5 inches high, set out, 6 inches apart, in trenches 6 inches deep. Cut off outer leaves and press soil firmly about roots. Cultivate thoroughly. When full grown, blanch by mounding gradually with earth or by pressing stems together by board on both sides of row. For winter storage, take up the plants with roots and place upright on wet soil in a dark cellar or root-house, packing closely. Those who grow Celery for market will be interested to know that we have a proven strain of the old original Dwarf Golden Self-blanching Celery.

Easy-blanching or Sanford Superb. A celery resembling Golden Self-blanching, but the leaves are green and stalks white instead of yellow. Stalks of same form and heavy heart as the Golden and blanch very quickly and easily. A very fine celery for fall and winter use. It keeps well, is of fine quality, solid and stringless. Pkg. 10c; 1/2 oz. 35c; oz. 60c.

GIANT PASCAL. Splendid green-leaved winter celery for home and market gardens. Stalks are extra large, quite broad, and solid. The color is pale green, but the stalk blanches readily to white with a creamy white heart. For late winter use, no variety approaches Giant Pascal. Pkg. 10c; 1/2 oz. 35c; oz. 60c.

Golden Pascal. A new, late-maturing, yellow-stalked, green-leaved variety. Taller than Golden Self-blanching and of particularly fine flavor and quality. We recommend this for near-by markets. It is so brittle and tender that it bruises easily. Pkg. 15c; 1/4 oz. 40c.

GOLDEN PLUME. A special, early-blanching strain of the very highest type. Large stalks, with a full golden yellow heart. The stalks blanch easily, are crisp and brittle, and remain in good condition for several days after digging. Extra fine for home gardens and market. Pkg. 15c; 1/2 oz. 50c; oz. 85c.

GOLDEN SELF-BLANCHING CELERY. This is the Celery that is generally grown for market and is a splendid kind for your own home garden. It is early, dwarf-growing, and easily blanched. The stalks are thick, solid, crisp, and brittle. The quality is excellent, tender, and free from stringiness. Grow this kind for fall and early winter use. Pkg. 15c; 1/2 oz. 45c; oz. 80c.

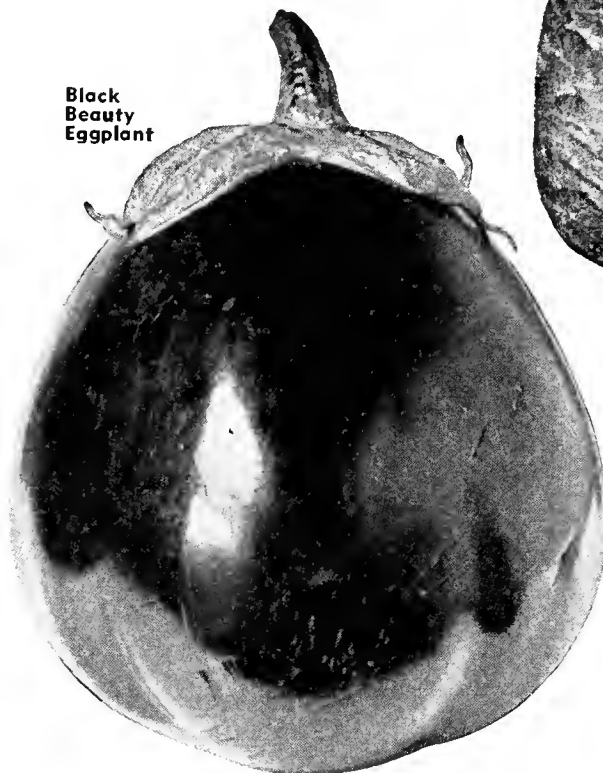

HART & VICK'S GOLDEN WONDER. It is tall-growing, with more edible stem than any other kind. The plants are heavy and compact, full-hearted, and very upright-growing. Stems are broad, thick, brittle, and free from strings. The flavor and quality are unusually good. Not a good winter-keeper. Pkg. 15c; 1/2 oz. 60c; oz. \$1.

Utah or Salt Lake. Not only of very high quality, but this new green-leaved celery is a splendid keeper and we recommend it for winter storage. The stalks and heart are large and easily blanch a pure white. They are crisp, brittle, and a wonderful flavor. Pkg. 15c; 1/2 oz. 50c; oz. 85c.

White Plume. An extremely early and very easily blanched variety of particularly good flavor. The stalks are white, the foliage light green. Recommended for early garden and market use only, as it does not keep well. Pkg. 10c; 1/2 oz. 35c; oz. 60c.

WINTER QUEEN. A splendid winter-keeping celery with a very large heart. Compact in growth, crisp, and has a delicious nutty flavor. Late celeries require a different treatment from the self-blanching sorts. Pkg. 10c; 1/2 oz. 30c; oz. 50c.

Beauty
Eggplant

EGGPLANT

One package of seed will produce 100 plants;

BLACK BEAUTY. An extra-early, strong-growing, productive variety. The fruits are large, purple-black, entirely spineless, and of high quality. Holds its color a long time and is a desirable market variety. Pkg. 10c; 1/2 oz. 30c; oz. 50c; 1/4 lb. \$1.35.

Improved New York Spineless. A very productive variety, popular in both home and market gardens. Plants produce 6 to 8 large, spineless, dark purple, oval fruits of high quality. Pkg. 10c; 1/2 oz. 30c; oz. 50c; 1/4 lb. \$1.35.

Celeriac, Large Smooth Prague

CELERIAC

Turnip Rooted Celery

This delicious vegetable, although used extensively throughout Europe, is but little known in this country. If you do not grow it, you are missing something really good. It resembles Celery but has an enlarged, turnip-like root in place of stalks that will keep for almost a year when packed in sand in a cool place. Cultivate same as Celery, except no hilling is necessary. It is cooked in various ways, boiled and creamed, put in stews or sliced very thin and put in boiling water, then served cold in salads. Every gardener should grow it.

Large Smooth Prague. Pkg. 10c; oz. 30c; 1/4 lb. 85c; lb. \$2.75.

CHIVES

Produces small green leaves with flavor like a mild onion. Used chiefly for seasoning. Leaves may be cut freely as they grow rapidly. Pkg. 15c; 1/2 oz. 35c; oz. 60c.

If you are ever in doubt as to the best varieties of vegetables for your garden, or where to get the best seed, consult with the nearest agricultural school or experiment station. You will find the men there very able and always willing to give you the necessary help.

SWEET or SUGAR CORN

*Our Northern Grown Seed Corn
Means Earlier Crops and Hardier Plants*

Sweet corn can be raised on any good, ordinary soil that is thoroughly worked. Plant 6 kernels to the hill, which should be about 3 feet apart each way, covering seed with about 1 inch of soil firmly pressed down. Thin out to 3 plants to a hill. To grow in rows, plant kernels 1 foot apart, in rows 3 feet apart. For succession, plant every two weeks up to July 15.

Pkg. 10c; ½ lb. 20c; lb. 35c; 2 lbs. 65c;
5 lbs. \$1.35, postpaid, except
as otherwise noted.

Varieties are listed in order of ripening.

SENECA "60". The Earliest Hybrid. Matures in 60 days. Very prolific; bears two and sometimes three ears to the stalk. Six-inch ears packed full of medium size golden yellow kernels. Good quality for such an early sweet corn. Pkg. 15c; ½ lb. 35c; lb. 60c; 2 lbs. \$1.10; 5 lbs. \$2.50, postpaid.

SIXTY-DAY GOLDEN. Ready to eat in 60 days. The earliest open pollinated sweet corn. Ears are 6 inches long, filled with 12 rows of creamy yellow kernels of good quality. A good variety for both home and market.

GOLDEN CROSS BANTAM

The highest quality hybrid sweet corn that we have seen. The ears are about 8 inches long, with 14 rows of cream-colored kernels. Golden Cross is ready for use in about 88 days. Stalks are 4 to 5 feet high, thrifty growers, and bear two ears to a plant. We believe it is one of the leading yellow sweet corns, and recommend it to all progressive gardeners. Pkg. 10c; ½ lb. 25c; lb. 45c; 5 lbs. \$2.15, postpaid.

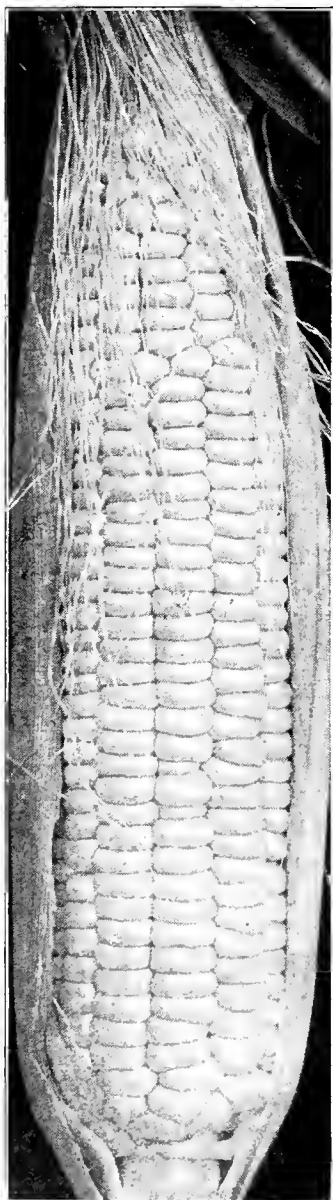

There are many hybrid (crossed) sweet corns offered. When other hybrids come along that we think worthy of a place in your garden, we will tell you about it in this book.

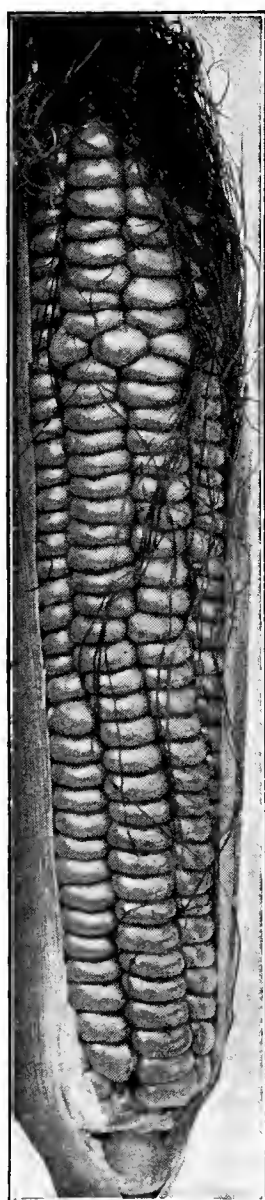

Golden Colonel

Golden Cross Bantam

Stowell's Evergreen

Golden Bantam

Golden Gem. (70 days.)

A good early yellow-kernelled sweet corn—ready to eat nearly 3 weeks before Golden Bantam. Ears short and full of sweet, finely flavored kernels. Stalk very dwarf.

Spanish Gold. (70 days.) Ears 6 to 7 inches long, with 10 rows of sweet golden yellow kernels.

GOLDEN SUNSHINE. (74 days.) This new Corn is 10 days earlier than Golden Bantam. The ears are 6 inches long, filled with tender, juicy, sweet kernels, set close together in 12 rows instead of 8 as in the Golden Bantam.

Golden Early Market. (75 days.) One of the very best large-eared yellow corns for both home and market gardens. Has 12 rows of creamy yellow kernels of very good quality. Matures nearly a week before Golden Bantam.

GOLDEN BANTAM. (78 days.) Hart & Vick's old-fashioned strain with 6-inch ears, 8 rows of deep kernels; the original strain that made Golden Bantam famous, is, we believe, away ahead of any other offered. Not only has it the wonderful richness, sweetness, and tenderness that make this variety so popular, but to these we have added the qualities of a larger and better-filled ear and a much greater yield. If you have only a small garden, grow just Golden Bantam; sow it in succession so you can have it on your table all season long.

WHIPPLE'S YELLOW. (78 days.) One of the best early yellow sweet corns that we know. It is ready for use at about the same time as Golden Bantam, but in most instances can be depended on to ripen a few days earlier than Bantam. The ears are long, running from 8 to 9 inches, and carry from 14 to 18 rows of deep yellow kernels, which are of extra good quality. It is a profitable sort for the market garden and no less valuable for the home garden.

Golden Evergreen. (80 days.) To gardeners who want a larger-eared corn than Golden Bantam, we recommend this variety. The ears are 8 to 10 inches long and filled with creamy yellow, tender, sweet, and juicy kernels of very fine quality. It ripens about 10 days later than our Bantam.

Golden Nugget. (80 days.) Similar to Golden Bantam, but if planted at same time is ready when Golden Bantam is gone.

Top-Cross Whipple's Yellow. (80 days.) An improved Whipple's Yellow with uniformly good ears filled with kernels of splendid quality.

GOLDEN COLONEL. (87 days.) A yellow Country Gentleman. Rich, deep, golden yellow kernels, shoe-peg shaped in irregular formation on 8-inch ears. Tender, sweet, delicious. We urge you to try this new variety. It is something different. Top quality.

Black Mexican. (88 days.) Kernels mixed, blue and white, but turn white when cooked. Unusually sweet, tender, and prolific. Many home gardeners declare it the finest quality of all sweet corn.

Early Evergreen. (90 days.) Deep white kernels of good quality and sweetness. Ears 8 inches long, with 14 to 18 rows.

Country Gentleman. (93 days.) A fine main-crop variety for home garden, market and canning. Ears 7 to 9 inches long, covered with irregular rows of long, slender white kernels. One of the best of later varieties.

STOWELL'S EVERGREEN. (95 days.) The standard main-crop sweet corn for home garden or market. Ears are very large and filled to the tips. The sweet kernels are pure white. Remains fresh and edible longer than any other variety.

Pop Corn

Pkg. 10c; ½ lb. 25c; lb. 40c; 5 lbs. \$1.75, postpaid.

Baby Golden. Sweet and tender yellow hullless kernels.

Japanese Hullless. Ears short and very thick. Kernels long, slender, pure white.

CUCUMBERS

For the Home Garden

One package of seed will sow 15 hills; 1 oz., 50 hills.

Cucumbers should be raised in every home garden. They can be grown to perfection with ordinary care. Plant seed when danger from frost is over, an inch deep in hills 4 to 6 feet apart each way, dropping 8 to 10 seeds in a hill. When second set of leaves has formed, thin to 4 plants to a hill. Cultivate thoroughly until runners make this impossible. If plants are attacked by beetles, spray with Bordeaux or arsenate of lead. Wash fruits thoroughly before eating when these sprays are used.

A. & C. One of the new kinds, long, slim, blunt-ended, skin dark green, flesh a splendid quality. Vine robust and heavy bearing. A Cucumber whose popularity is rapidly growing with commercial growers. Pkg. 10c; oz. 25c; ¼ lb. 85c.

Chicago or Westfield Pickling. Deep green, medium length, crisp. Very prolific. Pkg. 10c; oz. 15c; ¼ lb. 45c.

Japanese Climbing. Trained on a trellis or poles, these ripen earlier, forming straight, handsome fruits 12 to 16 inches in length. Skin smooth, dark green; flesh mild, crisp, and pure white. A black-spined variety. Pkg. 10c; oz. 25c.

LONGFELLOW. Slender, 10- to 12-inch, dark green fruit of high quality. The vines are vigorous and productive. Pkg. 10c; oz. 20c; ¼ lb. 65c.

NATIONAL PICKLING. Anyone who likes the small sweet or sour pickles will want to grow a great patch of this new Cucumber. Likewise, if you are partial to "dills," let the Cukes remain on the vines until they are of the right size. The vines are thrifty and bear heavy crops. Pkg. 10c; oz. 20c; ¼ lb. 65c.

Snow's Perfection Pickle. Popular for pickling; bears small, dark green, uniformly shaped fruits. An ideal battle pickle. Pkg. 10c; oz. 15c; ¼ lb. 50c.

HART & VICK'S *Lettuce*

For extra-early plants, sow seed in February or March in hotbeds; transplant to open ground in April. Lettuce, to be at its best, should grow rapidly. Soil should be made as rich as possible by fertilizing and thorough preparation. For main garden crop, sow seed outdoors in a warm spot in the garden, as early in spring as possible, in rows 18 inches apart. The way to raise good heads of lettuce is to thin them out when they are an inch high so they will stand 8 inches apart in the row. Fresh lettuce can be had all season by sowing at intervals of two weeks.

One package of seed will sow 35 feet of row; 1 ounce, about 200 feet

For a very early crop, sow the seed in the cold frame in February and transplant when large enough.

Hart & Vick's Radishes

One package of seed will sow 15 feet of row; 1 ounce, 60 feet

This is another vegetable that loses about half its flavor if not eaten within a very short time after it is taken from the ground. Radishes wilt like flowers and other vegetables, and lose their fresh crispness and juicy, delicate flavor. You cannot know how really good Radishes are if you haven't gone out in the garden in the early morning and pulled a few for your breakfast.

For forcing, sow in hotbed or under glass in rich, sandy loam. Scatter 50 to 100 seeds to the foot and cover with $\frac{1}{4}$ inch of soil sifted on. Sow in garden, as early as possible, in rows about 1 foot apart and thin to prevent crowding. A good dressing of nitrate of soda will greatly help their growth and make them tender and crisp. Successive sowings every week or 10 days will keep your table well supplied the entire season.

Vick's Early Scarlet Globe

Our Special Strain of this Radish for the home and market garden is very fine. The seed is selected from bulbs of the true Scarlet Globe type. It is a strain we can recommend to both market and home garden growers. Vick's Scarlet Globe is the best all-round Radish on the market. Tops are very small. Bulbs of our Special Strain are uniformly true globe-shaped, rich scarlet; flesh pure white, crisp, tender, juicy and mild. Pkg. 10c; oz. 15c; $\frac{1}{4}$ lb. 35c; lb. \$1.00.

CAVALIER. A new brilliant scarlet, olive-shaped radish, very uniform in size and shape. Quick growing and with short tops. Flesh solid, crisp, mild and pure white. The short top makes this an ideal variety to grow in greenhouses or on muck land. Pkg. 10c; oz. 15c; $\frac{1}{4}$ lb. 35c; lb. \$1.00.

Crimson Giant. Ready to eat in four or five weeks after sowing the seed. It is the best of the larger bright red Radishes, with white, crisp, tender flesh. In size it is about $1\frac{1}{2}$ inches in diameter and 2 inches thick. Pkg. 10c; oz. 15c; $\frac{1}{4}$ lb. 35c; lb. \$1.00.

Early Scarlet White-Tip. An early, round, white-tipped, bright scarlet Radish that is a favorite in the home-garden. Flesh is white, crisp, juicy, and of high quality. Pkg. 10c; oz. 15c; $\frac{1}{4}$ lb. 35c; lb. \$1.00.

Icicle Radishes

French Breakfast. An early, quick-growing, small, olive-shaped Radish of deep rose-scarlet color, touched with pure white at tip. Excellent for growing outside or under glass. It has been a favorite for years, and well deserves its popularity. Pkg. 10c; oz. 15c; $\frac{1}{4}$ lb. 35c; lb. \$1.00.

Glowing Ball. In shape it is almost a perfect ball, with smooth skin, and is about an inch in diameter. The color of the skin is bright scarlet with a flash of orange. Flesh is white, with slight veinings of red. It has a short top. Pkg. 10c; oz. 15c; $\frac{1}{4}$ lb. 35c.

ICICLE. (Short-Top strain). A very attractive, pure white Radish, the earliest of the long, white summer sorts, distinct in flavor, very mild, and extremely tender. One of the most desirable varieties for outdoor summer planting for the home garden and market. Pkg. 10c; oz. 15c; $\frac{1}{4}$ lb. 35c; lb. \$1.00.

The variety has small tops and can be used for forcing as well as for the open ground. Pkg. 10c; oz. 15c; $\frac{1}{4}$ lb. 35c; lb. \$1.00.

SPARKLER. A quick-growing variety of deep scarlet color, with a distinct white tip that makes it very attractive. It holds its quality longer without becoming pithy than most early kinds. The flesh of this Radish is pure white, crisp, tender, and delicious. Not only an excellent kind for the home garden but a money-maker for the commercial grower on account of its appearance, and because it comes to market early when prices are at their best. Pkg. 10c; oz. 15c; $\frac{1}{4}$ lb. 35c; lb. \$1.00.

TWENTY-DAY (Soho). This splendid sort will please everyone who likes round, red, crisp little Radishes very early in the season. It is very fast-growing, fit to pull in less than 20 days. The flesh is pure white, tender, juicy and of very mild flavor. This is also a fine Radish for forcing under glass, being ready for market before any of the other red kinds. Pkg. 10c; oz. 15c; $\frac{1}{4}$ lb. 35c; lb. \$1.00.

FALL AND WINTER RADISHES

These Radishes are not intended to be eaten like the spring sorts, but should be sliced, soltd down 15 minutes, drained, and then served, without further dressing, when they are as tender as you could wish any Radish to be. Sow in May and then every two weeks. The October crop should be stored in sand for use in winter.

Long Standing Bloomsdale Savoy Spinach

Spinach for Table Greens

No plant makes more palatable and nutritious greens than Spinach. For spring and summer use, sow the seed in drills 1 foot apart and 1 inch deep, as early as the ground can be worked, and make successive sowings every 2 weeks up to May 15. For winter and early spring use, sow in September and cover with straw at the approach of winter. Keep Spinach well cultivated and water liberally during dry weather.

One package of seed will sow 15 feet of row; 1 ounce, 100 feet; 10 pounds, an acre.

Blight-resistant Savoy. For fall sowing. An excellent blight-resistant kind similar in leaf to Bloomsdale. Pkg. 10c; oz. 15c; lb. 45c.

HART & VICK'S SUMMER SAVOY. A splendid new Spinach to grow during the hot summer months when other varieties are not available. An erect plant with dark green, crumpled, thick, glossy leaves of fine texture. We urge both amateur and professional gardeners to try this new Spinach. Pkg. 10c; oz. 15c; lb. 45c.

KING OF DENMARK. The leaves are crumpled and blistered, large, rounded, and of a rich, dark green color. Pkg. 10c; oz. 15c; lb. 45c.

Salsify

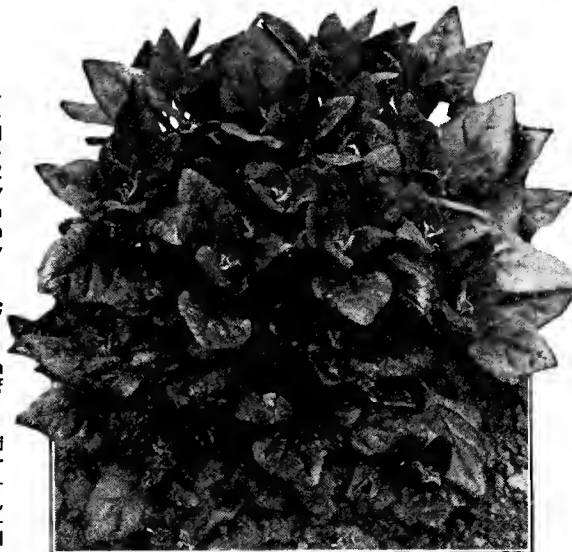

LONG - STANDING BLOOMSDALE SAVOY. A very early variety, and one of the best and most popular to plant in the home garden and for market. It is an upright grower with thick, glossy, dark green leaves, broad and crumpled, like Savoy cabbage. Very hardy, rapid grower, standing longer before going to seed than any other kind except King of Denmark. Pkg. 10c; oz. 15c; lb. 45c.

Prickly or Fall. A very hardy variety, especially adapted for fall planting. Plant large, very vigorous, hardy, with thick, dark green leaves. Pkg. 10c; oz. 15c; lb. 45c.

Old Dominion. Blight-resistant. A typical "long-standing" Spinach with large, dark green, thick, crumpled leaves. Seed may be sown in the spring for summer cutting, or in the late fall for an early spring crop. The fact that it is of fine quality and long standing makes it extremely desirable for commercial growers and for the home gardeners. Pkg. 10c; oz. 15c; lb. 45c.

Princess Juliana. This Spinach has three fine qualities that make it a great home garden variety. The leaves are thick, crumpled, and of fine flavor; plants are strong and upright growing, holding the leaves up from the ground and keeping them clean; it can be used for a long season, as it is very slow in going to seed. Pkg. 10c; oz. 15c; lb. 45c.

VIKING. A new variety that combines the good qualities of King of Denmark with the heavy yield of the old-time Viroflay. It is popular with market gardeners because of its rapid growth. The large heavy leaves remain in good condition for a long time. Another point is that the leaves are smooth, thus making it a simple matter to clean the foliage for the table. Not only is it a profitable sort for the market gardener but it is a most desirable Spinach for the home garden. Pkg. 10c; oz. 20c; lb. 50c.

New Zealand Spinach

NEW ZEALAND SPINACH

(*Tetragonia Expansa*)

Unlike other varieties of Spinach, it thrives during hot weather and in any soil, rich or poor. The tender shoots are of splendid quality, and may be cut throughout the entire summer. If you have never grown this great green, it will pay you to try it this season. Gardeners all over the country are loud in their praises of it. Plant three or four seeds in hills 2 feet apart each way. Germination of the seed can be hastened by soaking in warm water 24 hours. Pkg. 10c; oz. 15c; 1/4 lb. 35c; lb. 75c.

RHUBARB

Viking Spinach

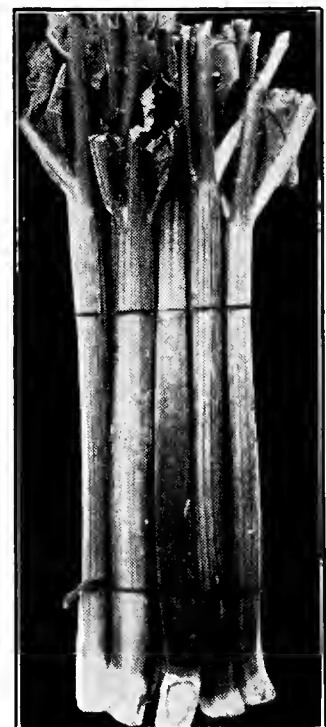

SALSIFY - Vegetable Oyster

One package of seed will sow 20 feet of row; 1 ounce, 50 feet.

One of the most desirable winter vegetables. The roots, when cooked, have a flavor similar to oysters, are very palatable and nutritious and are served in a variety of ways. Salsify succeeds best in a light, well-enriched soil. Sow early and quite deep, giving the general culture recommended for parsnip. The roots are perfectly hardy and may remain out all winter, but should be dug early in the spring, as they deteriorate rapidly after growth commences.

Correct Planting Depth

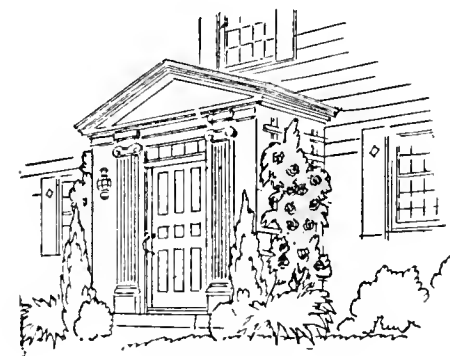

How We Plant and Care for Our Roses at Fairport Display Gardens

Get your rose bed ready before your new plants arrive. Choose a spot that is protected from strong winds and get at least half a day of full sun. At our Fairport Rose Gardens, where we are making an entire new bed, we shovel all the dirt out to a depth of 18 inches. Then we put 4 inches of Peat Moss in the bottom of the bed, add Bonemeal, 10 lbs. to 40 sq. ft., and spade up deeply with a spading fork. We mix the soil we have taken out of the bed with one-third Peat Moss, and shovel it back into the bed. We are then ready for our roses. If we are spotting plants in an existing bed, we dig an individual hole about 14 inches in diameter for each plant, treating the soil the same as above. Don't expose the roots of the roses while you are planting, to the sun or wind. Keep them covered always. When planting in the spring prune the tops of the plants

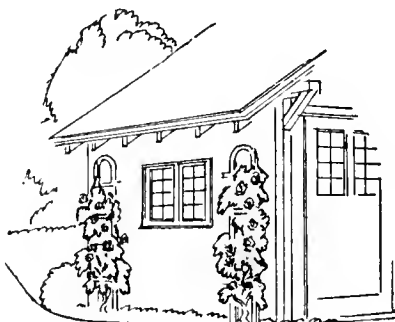

to stand about 6 inches above the ground, leaving at least three eyes. Trim off any broken or cracked roots. Set Hybrid Tea roses 15 inches apart, larger growing kinds 18 to 24 inches. Spread the roots carefully. Pack the dirt around them snugly. When hole is three-quarters filled with soil, soak with water; when water has disappeared fill balance of hole with soil not packed down hard. See diagram of depth to plant. At Fairport we feed the plants every 14 days, using 2 ounces of a complete plant food per plant until September 1. We dust or spray every week, one week with a fungicide for Black Spot and Mildew, the next week with an insecticide for eating and sucking insects. In June we cover our beds with an inch of Shredded Tobacco or Peat Moss.

WINTER PROTECTION

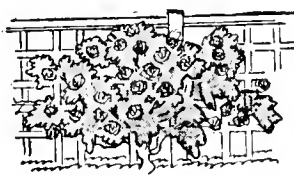

Just before the first hard freeze in the fall we cut our plants down to about 18 inches, remove the mulch of Shredded Tobacco or Peat Moss that might harbor Black Spot over winter, spray or dust them with a fungicide, and hill them up with 6 inches of soil. After the ground has frozen we cover them with straw, corn stalks or leaves. In the spring we remove this litter, and level the soil, trim our plants to 6 inches and 3 eyes, and start our regular feeding and spraying program. This method of culture has been very successful with us at our Fairport Trial Grounds. We believe it will help you with your rose growing.

GLADIOLUS of Quality and Distinction

So wonderful have been the improvements in this most popular garden flower during the past few years that we have omitted the old varieties from our list and describe only these new kinds. Gladiolus are easier to grow than any other flower we know. They are never bothered with bugs, no disease spoils them—all they require is ordinary garden soil, water when it is dry, and they will thrive and bloom profusely. We particularly call your attention to the very reasonable prices at which these new kinds are quoted.

If you want a superb showing of Gladiolus in your garden, plant the bulbs in groups of six, eight, or twelve of a kind. As a background for annuals and perennials, and among shrubs and evergreens, the effect will be most pleasing.

All our bulbs are over-size, clean, free from thrip or disease, and will give you excellent results. We furnish 6 bulbs at the dozen rate; 25 bulbs of the same variety at the 100 rate. By mail or express, prepaid east of the Mississippi River; to more distant points add 5c per dozen.

Hardy Garden LILIES

All hardy borders should have some of the various kinds of Lilies scattered through them. Here they do their best, as they get the benefit of the shade of the near-by plants which is so necessary for successful growing. Plant these Lilies in the early spring, as soon as the frost is out of the ground, and allow a foot of space between them; a trowelful of coarse sand or sifted hard coal ashes under each bulb helps keep them dry. Give them good drainage and the best results will be obtained if you will plant them in rich garden loam mixed liberally with peat moss, compost and well-rotted manure. Follow directions as to depth each kind should be planted. **Six bulbs at the dozen rate, 25 at the 100 rate.**

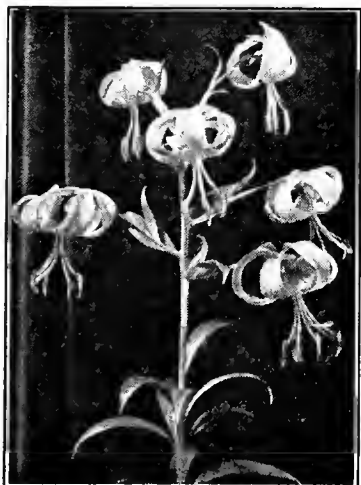

They may be planted anywhere; are especially fine among shrubbery or in the garden or border. Excellent for cut flowers.

THE NEW EVERBLOOMING DOORYARD ROSE

From the middle of June until hard frost, this big, strapping plant is covered with hundreds of very double and delightfully fragrant peach-blossom-pink roses. Not only is this a most remarkable rose for garden display, but is exceptionally valuable for cutting and house decoration, as its blooms last 10 days in water when cut. Plant very hardy, grows 2 ft. high, spreads 6 to 8 ft. Foliage battle-green and shows strong resistance to ordinary Rose maladies. **\$2.00 each; 3 for \$5.00.**
